

ECONOMICS CO-OP STUDENTS

ANALYTICAL | LOGICAL | UNDERSTANDING

ACADEMICS

Economics studies the challenges facing human beings as a result of the limited amounts of natural resources, human effort, skills and tools, buildings and materials produced in the past. The better use we make of these resources, the richer our lives can be. This focus of economics leads it to examine the major problems facing rich and poor nations today - unemployment, inflation, poverty and inequality, pollution and environmental degradation, lack of sustainable development, depletion of fish stocks and deforestation, government spending and taxation, budget deficits and national debts.
