DEPARTMENT OF BIOLOGY

St. Francis Xavier University is situated on the Gulf of St. Lawrence in Antigonish, Nova Scotia, Canada. Researchers and students have ready access to extensive marine, estuarine, freshwater and terrestrial environments, fish hatchery, animal care, microscopy and molecular biology facilities, and well-equipped modern research laboratories. Directed Studies, Honours, summer research, and Masters students are encouraged to apply to individual faculty members whose research field appeals to them. PhD students can also conduct research in Biology at StFX via co-supervision with faculty at Memorial University of Newfoundland.

RESEARCH – FACULTY

Cory D. Bishop, Associate Professor, Ph.D. Simon Fraser University, 2003, Postdoctoral studies at Kewalo Marine Lab (Hawaii), Friday Harbour Labs (Washington State) and Dalhousie University. I study an algal-salamander symbioses, involving genomics, molecular biology, microbial ecology, and evolution.

Moira E. Galway, Associate Professor, Ph.D., Australian National University, 1989; postdoctoral studies at the University of Saskatchewan and the University of Michigan. Genetics and development of flowering plants and algae, focusing on root development in *Arabidopsis* and epidermis development in *Ascophyllum*; cellular morphogenesis; the mechanisms of growth in plant cells.

David J. Garbary, Professor, Ph.D., Liverpool, 1978, postdoctoral study at British Columbia. Seaweed ecology and physiology, especially algae of economic importance. Ecology of rare and invasive plants.

Randolph L. Lauff, Part-time Faculty, Senior Lab Instructor, M.Sc. University of Calgary, 1993. Breeding and migration ecology of the Boreal Owl and Northern Saw-whet Owl. Ecology of Diving and of Carrion Beetles. Curator of Zoological collections.

Tammy Rodela, Assistant Professor. My research program explores how aquatic vertebrates structure their biological responses to multiple environmental stressors. Broadly, my goals are to i) examine the mechanisms that teleost fish use to respond to their environments, ii) evaluate how changes in severity, sequence, or timing of an environmental challenge could influence the dynamics of tolerance, iii) use comparative approaches to explain the variation in resistance or sensitivity to multiple environmental stressors. The research in my lab takes an integrative approach to examine the molecular, biochemical, and physiological responses in zebrafish and aquaculture salmonid fish species.

Ricardo A. Scrosati, Professor and former Canada Research Chair, Ph.D., University of British Columbia, 1997; past Professor at the Northwest Biological Research Centre (CIBNOR, Mexico), Bamfield Marine Sciences Centre (British Columbia), and University of British Columbia. Marine Ecology, with particular emphasis on intertidal seaweeds and invertebrates.

Barry R. Taylor, Associate Professor, Ph.D., University of Calgary, 1985. Postdoctoral studies at Institut nationale de la recherche scientifique – eau, Québec. Aquatic ecology, litter decomposition and energy flow in streams and rivers, effects of disturbance, soil ecology, ecological restoration.

Jantina Toxopeus, Assistant Professor, Ph.D. Western University, 2018, Postdoctoral studies at University of Colorado Denver. The Toxopeus lab researches how insects survive freezing, using an array of techniques that include cell and molecular biology, biochemistry, bioinformatics, and physiology.

Russell C. Wyeth, Associate Professor, Ph.D. University of Washington, 2004, postdoctoral studies at Dalhousie University and Bamfield Marine Sciences Centre. Behaviour and neurobiology of sea slugs, snails, lobster and other invertebrates. Understanding how sensory systems, the central nervous system and motor systems control behaviour. Field observation (including SCUBA) of behaviour, video analysis of field and lab behaviours, microscopy and electrophysiology. Also part of the Centre for Biofouling Research, studying settlement and development of communities on man-made surfaces, and how to mitigate or reduce fouling.

SENIOR RESEARCH FACULTY (Retired)

John A. Buckland-Nicks, Professor, Ph.D., U. of Alberta, 1974. Gametogenesis and mechanisms of fertilization in animals, marine invertebrate reproduction, evolution of internal fertilization and electron microscopy.

William S. Marshall, Professor, Ph.D., U. of British Columbia, 1977, postdoctoral studies at U. Calif. Berkeley. Epithelial and renal physiology in lower vertebrates especially teleost fish; cellular electrophysiology and patch clamp; solute and water transport across membranes; comparative endocrinology, hormonal control of osmoregulatory mechanisms. Comparative genomics of stress responses in fish.

Anthony G. Miller, Associate Professor, Ph.D., Queen's University (Kingston), 1973, postdoctoral studies at Cornell University. Active transport of CO_2 and HCO_3^- by cyanobacteria; studies on photosynthetic electron transport; the mechanism of O_2 photoreduction by cyanobacteria; the role of carboxysomes in cyanobacterial photosynthesis

P. James Williams, Associate Professor, Ph.D., Memorial University of Newfoundland, 1994, postdoctoral studies Department of Fisheries and Oceans. Marine Ecology, early life history of fish, ecotoxicology.

Lori L. Graham, Associate Professor, Ph.D. University of Calgary, 1986, postdoctoral studies, University of Guelph. Examination of the molecular interactions between eukaryotic cells/tissues and opportunistic bacterial pathogens.

ADJUNCT FACULTY

Joke Adesola Adjunct Professor, B.Sc. & M.Sc. Fisheries Management; MAGRIC Agricultural Management; Ph.D. Fisheries Science. Sustainability of Aquatic Living Resources.

Justin D. Gregg, Adjunct Professor, Ph.D. Trinity College Dublin, 2008. Justin is a Senior Research Associate with the Dolphin Communication Project. Justin has a research focus in dolphin social cognition, intelligence and cognition in non-human animals, and a background/interest in linguistics and the evolution of language.

CROSS APPOINTED FAULTY

Daniel A. Kane, Associate Professor, Ph.D., East Carolina University, 2010. Exercise metabolism, mitochondrial physiology.

Marcia English, Assistant Professor, PhD. Dalhousie University, 2017. My research program advances knowledge in the areas of Functional Foods and Protein and Flavour chemistry. My students and I are working to understand the functional properties of plant-based food systems and to elucidate the mechanisms that contribute to the release and retention of flavour and off-flavour compounds. We use model food systems based on Canadian pulses to study these interactions. Our work fills an important gap in the literature where there is a lack of fundamental studies aimed toward understanding flavour mechanisms in plant-based food systems.
