**HNU 495 Sustainable Food Systems and Diets:** Using an experiential approach, concepts, current issues and applications of citizenship, sustainability, sovereignty, security and policy in the context of food and food production systems will be explored in this course. Students will learn the foundations of growing food and be encouraged to broaden their capacity as gardeners and food citizens regardless of prior experience through hands-on gardening activities, critical discussions, and independent project work with community organizations involved in building sustainable food systems. Sustainable food systems and diets are of increasing interest to the fields of health and sustainable development. This course will explore the foundational concepts of sustainability, food systems and diets, and problematize them in the context of today's reality. Students will examine current research and solutions-oriented initiatives to better understand how the issues are being conceptualized and addressed. Restricted to students in the HNU program. Prerequisites: HNU 161, 262. Three credits.
